The Soviet Navy commissioned in 1962 the first of 25 Kashin-class destroyer with 4 gas turbines in Combined gas and gas propulsion system. Those vessels used 4 M8E gas turbines, which generated from 54,000 kW (72,000 hp) up to 54,000 kW (96,000 hp). Those ships were the first large ships in the world to be powered solely by gas turbines.

Siemens heavy-duty gas turbines are robust and flexible engines, designed for large simple or combined cycle power plants. They are suitable for peak, intermediate, or base load duty, as well as for cogeneration applications. Customers benefit from our extensive validation and testing capabilities. Our engines are proven in commercial operation ...

Gas-turbine engine, any internal-combustion engine employing a gas as the working fluid used to turn a turbine. The term also is conventionally used to describe a complete internal-combustion engine consisting of at least a compressor, a combustion chamber, and a turbine.. General characteristics. Useful work or propulsive thrust can be obtained from a gas-turbine engine.

Gas turbine performance, performance verification, and maintenance are irrevocably linked in an end user ' s world. In summary, gas turbine performance verification (testing) is done at several levels. The testing of new GTs, done at the OEM ' s facility, may be witnessed by end-user reps. Sometimes functional, no-load tests are conducted

The superior power-to-weight ratio of the gas turbine and its fixed speed gearbox, allows for a much lighter prime mover than for the Toyota Prius (a 1.8 litre petrol engine) or the Chevrolet Volt (a 1.4 litre petrol engine). This in turn allows a heavier weight of batteries to be carried, which allows for a longer electric-only range.
