Introduction to mathematical programming : operations ...
Problems for which a solution can be obtained through a succession of independent decisions can often be solved by dynamic programming. Dynamic programming requires an introduction to recursion. This leads to a brief excursion through the Towers of Hanoi, Fibonacci numbers, and the binomial expansion.

The goal of this modeling tutorial is to introduce the key components in the formulation of mixed-integer programming (MIP) problems. For each component of a MIP problem formulation, we provide a description, the associated Gurobi Python code, and the mathematical notation describing the component. We use the Gurobi Optimizer to compute an optimal solution of the MIP model.
